

## FUTURE IS TODAY

BTC is a leading player in the Turkish market as renowned system integrator and solutions as well as service provider.

BTC' product portfolio comprises digital textile printers, digital textile consumables (inks, paper, etc.), various sublimation technologies, CAD/CAM systems for textile designing and coloring, Color Management Software with related hardware as well as consulting, maintenance and support. Through continuous innovation, long-term expertise and know-how as well as a powerful distribution network BTC adds significant value to its customer's processes and products.

In the textile industry today, sustainability is not only a preference, it's a requirement. At BTC, we recognize the importance of environmental responsibility in everything we do. Consequently, we seek to minimize any negative effect of our business on the environment by constantly improving our core processes and practices.

# BTC i5 Series

FOR TRANSFER AND DIRECT PRINTING  
ON POLYESTER FABRIC

SUBLIMATION INKS

### i5 Sublimation Inks

Our company, which has been known in the sector for many years for its best in class training and software support service, offers an innovative and multi-purpose solution for Sublimation printers / producers. i5 Series of Sublimation inks dispose of the most vibrant, brightest and widest color gamut in the sublimation market and enable the most cost-efficient usage.

### A wide range of application areas

i5 Series is suitable for Fashion, Sports & Active casual wear, Bags & Shoes, Flags & Banners, Fashion and Beachwear, Home Textile with excellent print quality, runability and widest color consistency.

The i5 Series is formulated for Epson and Kyocera print heads.

The product will soon be adapted to additional print heads and its properties continuously expanded.

**i5 Series Sublimation inks** ensure maximum color density at lowest consumption values. Thanks to its concentration it allows you printing on uncoated papers and thus reducing your production costs without sacrificing the print quality. The product is very fast drying on all types of paper and performs uniquely in all kinds of production conditions.

### Usage and Technology:

The i5 Series is suitable for (Piezo) Epson DX or Kyocera printheads for direct printing onto Polyester fabrics or onto transfer / sublimation papers (making it possible to apply all kinds of polyester fabrics by a sublimation method).

### Fixation

Heat Press or Calender at 200°C – 210°C for 30 seconds.

### Shelf life and Storage Conditions:

The inks should be stored in a clean environment at a temperature of 10°- 30°C avoiding any direct sunlight and heat sources. If stored under these recommended conditions the inks have a shelf life of 12 months.
